Ross *et al.*, PRL 2009, PRB 2011

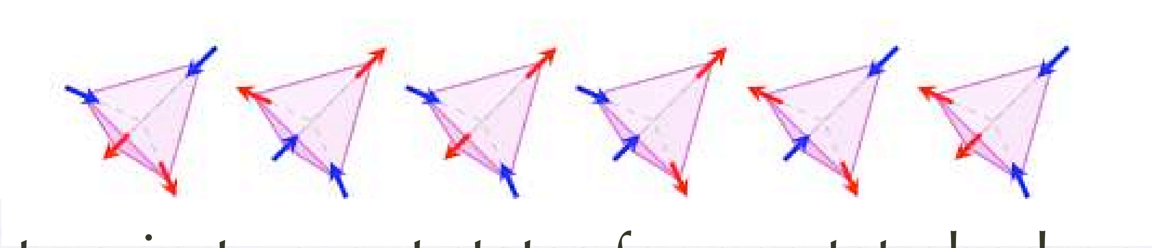
What we know

- What spin ice is -- Michel's talk this morning

$$H_{\rm SI} = J_{zz} \sum_{\langle i,j \rangle} \mathsf{S}_i^z \mathsf{S}_j^z \qquad J_{zz} > 0$$



two-in-two-out states for one tetrahedron

- What the generic definition of a quantum spin liquid is (and that it would be *very* nice to find one in nature) -- Leon's talk yesterday afternoon
  - looks trivial: $\langle \vec{\mathsf{S}} \rangle = \vec{0}$ *history
  - but non-trivial correlations & fractional excitations!

quantum entanglement

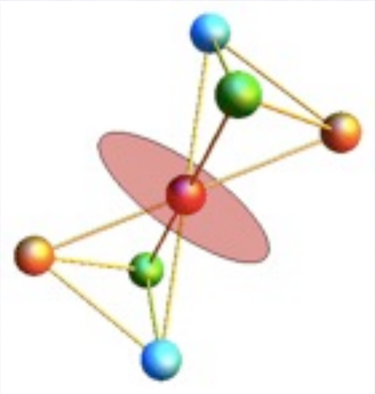
- Good place to look for QSLs: frustrated magnets

picture from Jaubert 2009

Rare-earth pyrochlores

- grown rare-earth pyrochlores: $Ho_2Ti_2O_7$, $Dy_2Ti_2O_7$, $Ho_2Sn_2O_7$, $Dy_2Sn_2O_7$, $Er_2Ti_2O_7$, $Yb_2Ti_2O_7$, $Tb_2Ti_2O_7$, $Er_2Sn_2O_7$, $Tb_2Sn_2O_7$, $Pr_2Sn_2O_7$, $Nd_2Sn_2O_7$, $Gd_2Sn_2O_7$, ...

- grown rare-earth B-site spinels: $CdEr_2S_4$, $CdEr_2Se_4$, $CdYb_2S_4$, $CdYb_2Se_4$, $MgYb_2S_4$, $MgYb_2S_4$, $MnYb_2S_4$, $MnYb_2Se_4$, $FeYb_2S_4$, $CdTm_2S_4$, $CdHo_2S_4$, $FeLu_2S_4$, $MnLu_2S_4$, $MnLu_2Se_4$, ...



lots of room for diverse behaviors!

Gardner, Gingras, Greedan, RMP 2010, Lago *et al*. PRL 2010

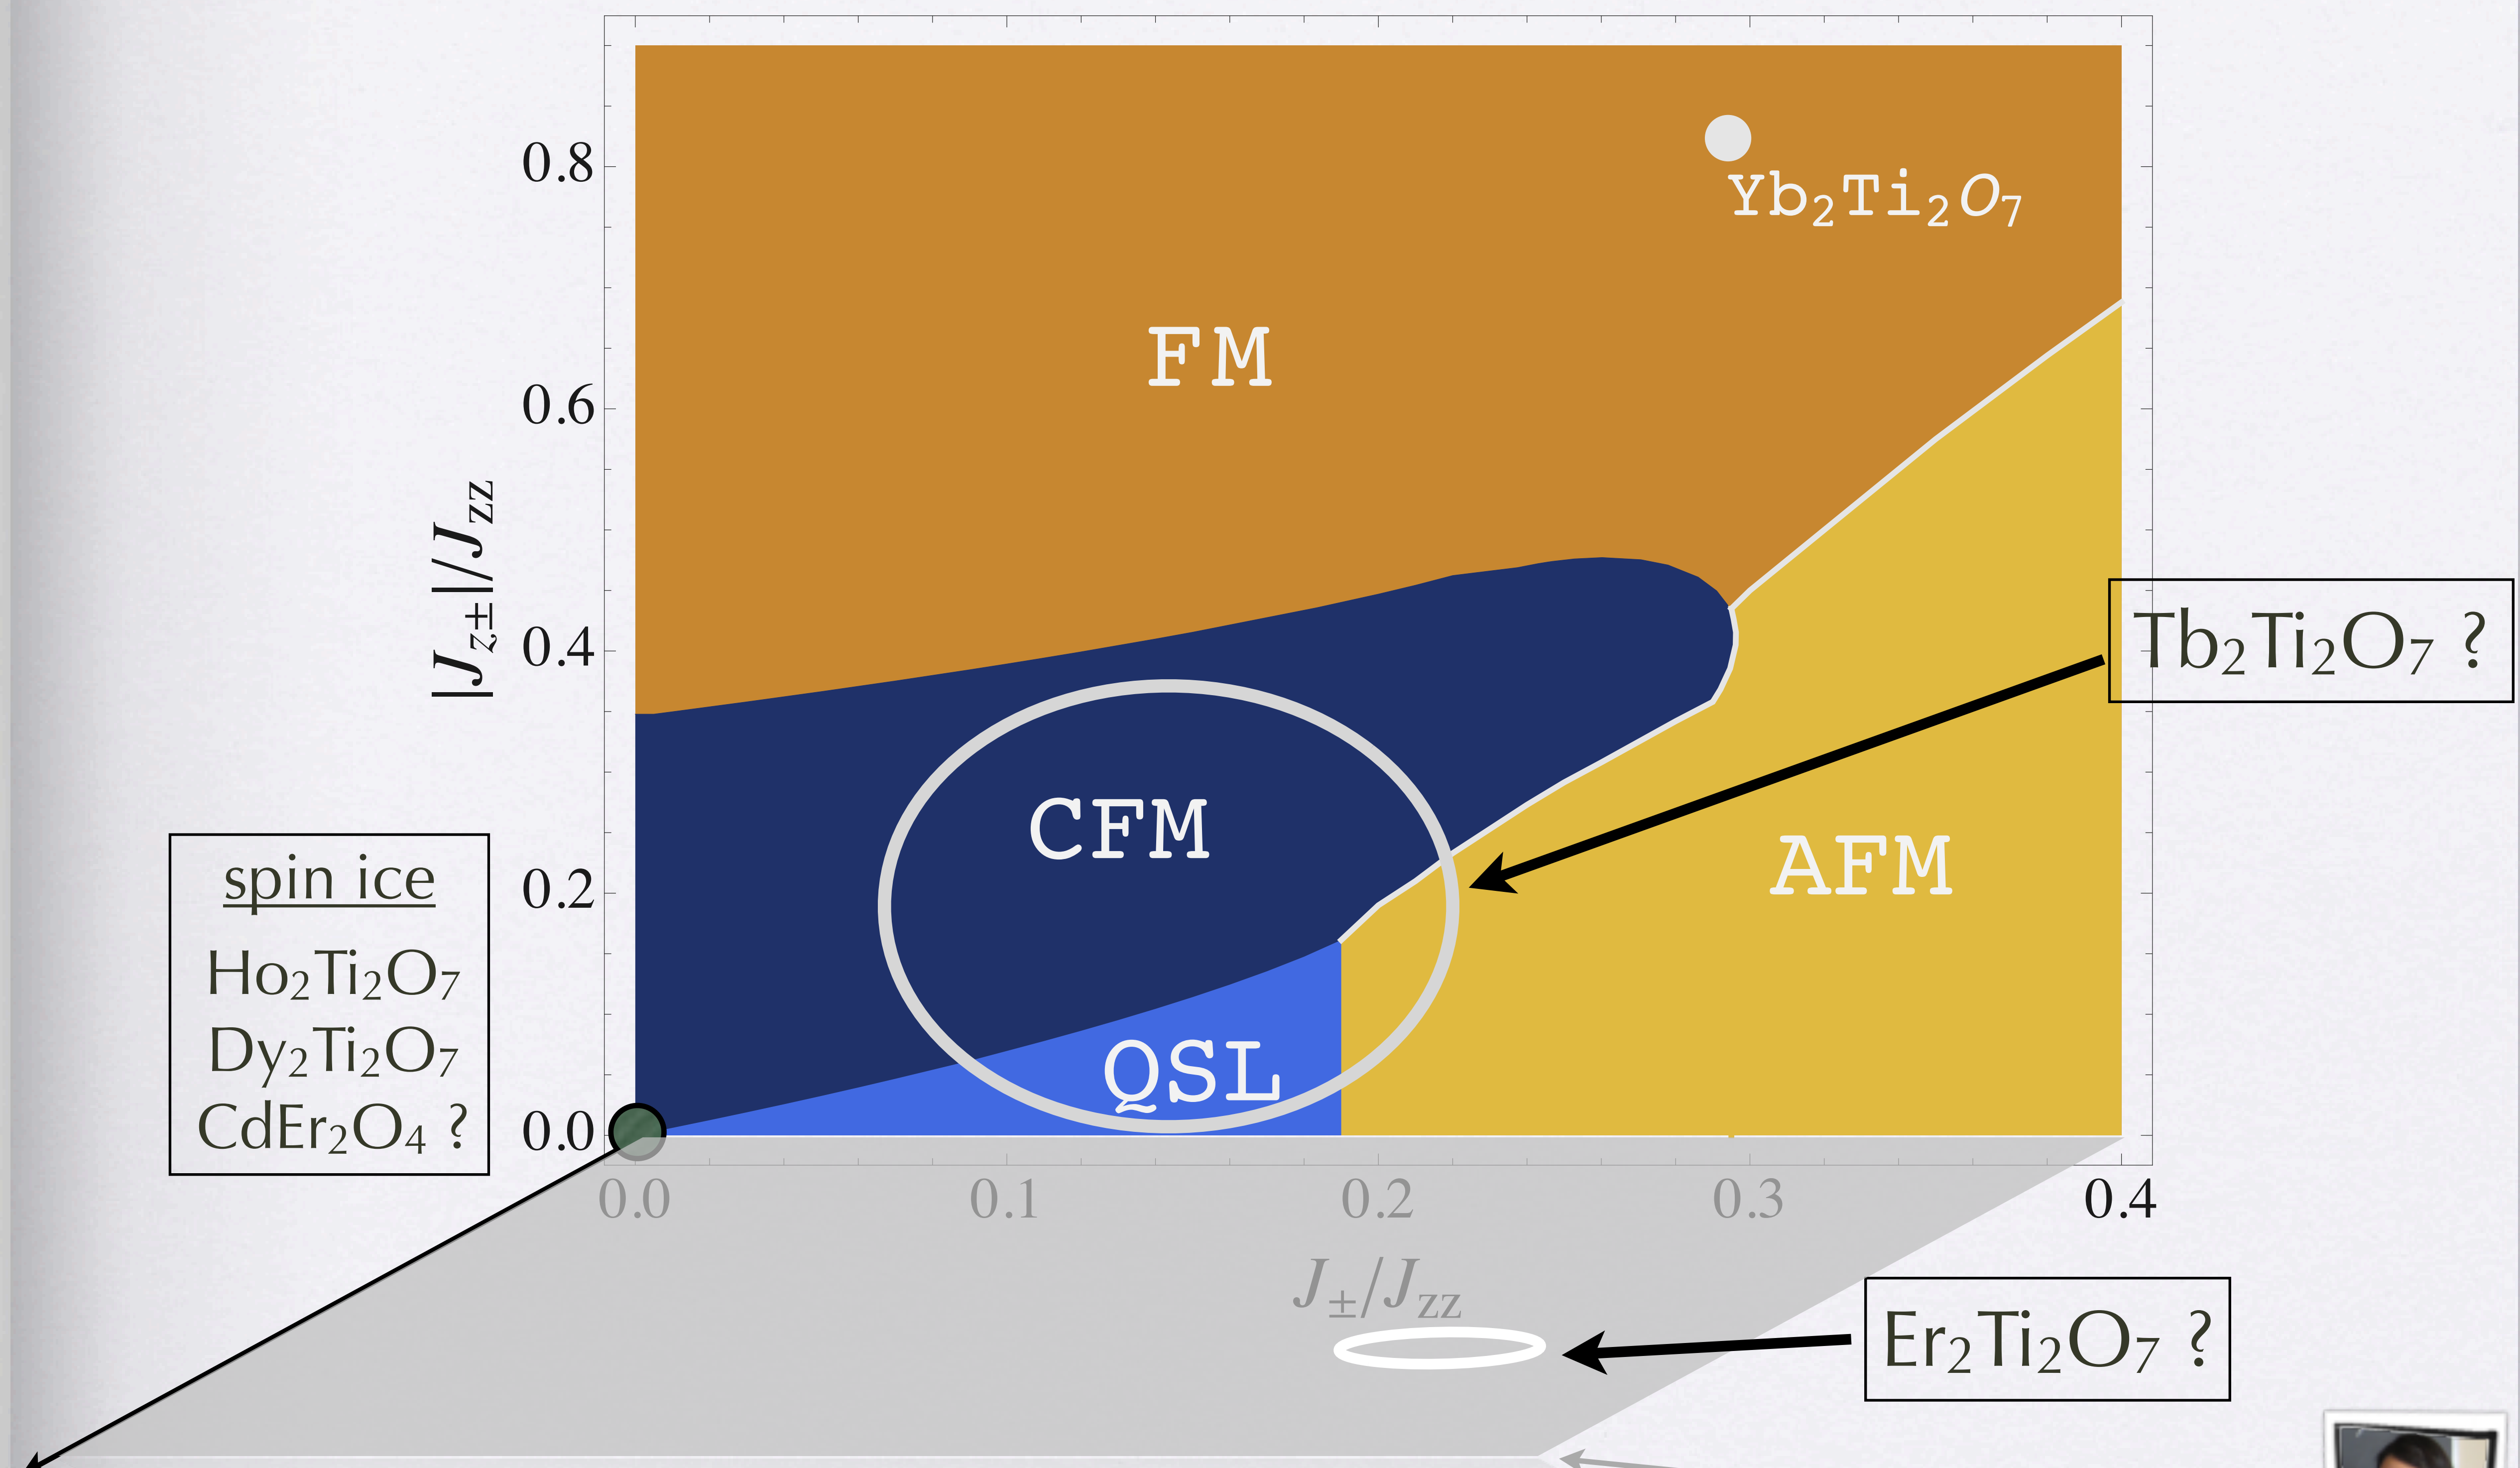
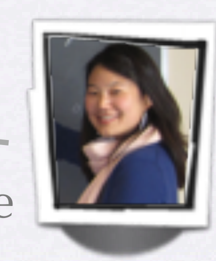
Materials





SungBin Lee

Conclusions and perspectives

- Model and phase diagram which should apply to a **wide spectrum of materials**
- Realization of the **U(1) QSL** in a phase diagram for **real materials**
- Existence of a **new phase of matter: the Coulomb FM**
- Need **numerics**
- Need exchange constants of **more materials**
- Need more **low temperature specific heat** data
- Effects of **disorder**
- Effects of **temperature**
- **Longer range** interactions...

Thank you for your attention
